Economic Institutions

WHAT IS ECONOMY? All societies have an economy which can be viewed as a social institution organized around production, consumption and distribution of goods and services. It operates in generally predictable manner.

Reciprocity -refers to the voluntary giving or taking of objects without the use of money in the hopes that, in the future, they could be given back. Reciprocity could take the form of barter, hospitality, gift-giving, and

sharing. You might not realize it, but people engage in reciprocity most of the time.

In societies, however, reciprocity means more than just a simple social activity. The aim of engaging in reciprocity is to build and strengthen social relationships as well as acquire more means or favors.

Utang na loob (Debt of Gratitude) Utang na loob is a good example of reciprocity in the Filipino culture. This is an act of kindness or favor that is expected to be given in return.

Forms of Reciprocity The three forms of reciprocity were identified by anthropologist Marshall Sahlins.

These forms of reciprocity are collectively known as Sahlins' Typology

Generalized Reciprocity Generalized reciprocity is the exchange of goods and services without a definite time frame of when the favor should be returned. Individuals giving out the favors do not expect to receive anything back. Such activity is commonly done among small groups or societies.

Balanced Reciprocity The exchange occurs between groups or individuals with the donor expecting to receive something of equal or similar value. There is no bargaining between two parties, and the exchange of goods occurs at a particular rate set upon by the groups. There is pressure to give back the favors at a specific point in time. Balanced reciprocity demands timely reciprocation that when favors are not received by the donor, they could refuse to continue giving out the favors.

pre-industrial societies, balanced reciprocity is usually organized through trade agreements. This would mean that one member of a group has a designated partner in another whom he or she chooses to trade goods with.

The pair is responsible for organizing the terms of their exchange, but no bargaining would still occur.

What is a Barter? Barter is an act of trading goods or services between two or more parties without the use of money. In essence, bartering involves the provision of one good or service by one party in return for another good or service from another party. **Barter System**

Negative Reciprocity, This happens when groups try to maximize their gains while giving as little as possible. They are motivated by the desire to acquire a large number of goods using minimal resources.

In pre-industrial societies, negative reciprocity is important especially when groups need to acquire products that are not easily accessible to them. In common terms, groups could "import" products that they need from other groups, and in order to reduce the favor, bartering and bargaining ("tawad") occur.

Transfer - A redistribution of income that is not matched by actual exchange of goods and services.

Redistribution Redistribution occurs when individuals' goods or services are pooled together by a central authority to be used at a later time. The central authority may refer to a regional collection point, a storehouse, or the national capital. Redistribution collects goods from individuals in a community to be kept by a central authority which will be used in the future by the same group.

A Market, in economic terms, refers to a bigger setting where buyers or sellers simultaneously trade or exchange goods or services. Markets could imply a global setting where states engage in market transactions to exchange goods or services.

In a market exchange, at least two people should be involved: one who has a product and another who has the money. Using a system of bartering and bargaining, the two individuals agree upon a specific price for a specific quantity of the product.

Elements of Market Transactions In understanding market transactions, it is important to also familiarize yourself with the elements that make up market exchanges. Note that these elements are also important in balancing the economy.

Element Description: a. Money-It consists of objects that serve as means of exchange for goods and services.

Market and the State

MARKET AND STATE The state government needs to foster economic growth to provide a good standard of living to its citizens. At the same time, markets exist because of the economic activities done by the state. As such, we could easily conclude that markets and states are dependent on each other.

Types of State According to Market Roles Relationships between the state and market vary in terms of degree of interdependence. The state plays different roles in relation to the market. There are at least three types of states depending on their role or relationship to the market, namely: 1. The Laissez-faire state 2. The Interventionist or Developmental

Laissez-Faire State Laissez-faire is derived from French words that mean "to leave alone." According to the principle of laissez-faire, the economy functions best when the government does not intervene through regulations, subsidies, privileges, and other types of intervention. The laissez-faire state, therefore, completely does not have any role in managing the market.

Interventionist or Developmental State The developmental or interventionist state is a state that intervenes in the market and sets the direction and pace of economic development that will bring about economic development.

In these types of states, the state (government) and the market are closely intertwined, and their relationship is managed by a special bureau or department that coordinates the developmental efforts of the state on the economy.

Welfare State The welfare state is one that plays an important role in the achievement and protection of the economic and social well-being of its citizens. In contrast to the developmental state, the welfare state's involvement is aimed at achieving a good quality of life for the citizens, rather than merely driving economic development.
